

Daro Manufacturing Services

“Trusted & Agile” – The Perfect Fit with AMADA

Suffolk based Daro Manufacturing Services, part of Daro Group, has recently installed their second state of the art AMADA HFE3i Press brake.

Daro Manufacturing Service's robust British design, development, fabrication, and product assembly services are based on strong foundations of many decades of expertise.

Being part of Daro Group, they benefit from the wider support of the Group's central resources such as strategic planning, sales & marketing, financial planning & management, and on-going investment.

So, when it came to updating their fabrication facilities, Daro knew what they needed and turned to AMADA to provide it. In 2018 they installed a heavy tonnage HFE3i-1703 8 Axis Press Brake, bringing the latest precision, highly efficient and easy to operate technology in-house. Just two years later continued growth meant that extra capacity was needed to keep up with demand, again AMADA was who they turned to.

“This is the second investment that Daro has made with AMADA in two years. Our first purchase was a 170 tonne 3-metre brake press to expand our heavy fabrication. Basing our decision on AMADA's reputation and the product's attributes of durability and reliability has proven to be sound.”

“Therefore, when it came to replacing the brake press for our lighter gauge sheet metal facility, we knew we were in good hands. Adding additional AMADA plant gives us greater efficiencies and flexibility with staffing.”

“The computerised CNC controller and the quick release clamping feature has not only helped us to achieve faster and more cost-effective production methods, it also reflects our commitment to continuous improvement.” Stuart Clarke, head of sales.

Daro Manufacturing Services, mantra is “trusted & agile” making them a perfect fit with AMADA.
